

# Environmental Health and Safety Policy

We, Vibro-Meter SA, specialise in the design and manufacture of vibration and condition monitoring systems for aerospace, industrial and marine applications.

Our products help to increase safety and to minimise polluting emissions of our customers' products. Moreover, we will reduce risk and environmental impact of our activities by applying the following principles:

- implement good environmental, health and safety management practices;
- recognise environment, health and safety as a key consideration at all times;
- meet or exceed all relevant environmental, health and safety legislation;
- ensure environmental, health and safety training and awareness of all employees;
- recognise that it is the duty of each employee to meet or exceed all relevant environmental, health and safety rules and procedures;
- use energy, raw materials and natural resources efficiently;
- reduce emissions of harmful substances;
- reduce waste through minimisation and recycling programmes and manage waste disposal in a responsible manner;
- integrate environmental, health and safety considerations into the design of our products and processes;
- develop products that are energy efficient and protective of the environment;
- work with our suppliers to minimise the impact of their products and operations on the environment;
- encourage personnel to report environmental, health and safety errors and/or incidents;
- regularly undertake audits and review to check the performance of our environmental, health and safety management system;
- establish programmes of continuous improvement.

The management is committed to providing the necessary support in order to ensure the fulfilment of the principles outlined in this policy. The management retains accountability to all interested parties.

On behalf of the Management

Peter Huber
